PROFESSIONAL SUMMARY

Tech Lead and Certified Kubernetes Application developer with **10+ years of experience developing and delivering mission-critical, enterprise-grade backend systems**. Combines deep technical expertise in J**ava Spring Boot, Kubernetes, AWS, and distributed systems architecture** with proven leadership in **team mentorship, architectural governance, and high-availability solution delivery**.

CORE COMPETENCIES

Backend Architecture & Development: Java Spring Boot, Microservices Design, Distributed Systems, Event Storming, DDD
Cloud & DevOps: AWS, Kubernetes, Docker, CI/CD, Infrastructure as Code
Data & Databases: PostgreSQL, Spark, Trino, iceberg, JPA/ORM
Leadership & Software Engineering: Technical Leadership, Mentoring, Agile Methodologies (Scrum, Kanban), Architecture Design

TECHNICAL SKILLS

Languages: Java (17+), SQL, Python, Bash, JavaScript/TypeScript, C/C++, C#, PHP, Perl

Tools: Git, Spring Boot, Docker, Kubernetes, Kafka, RabbitMQ, Redis, GitLab CI/CD, Spark, Trino

PROFESSIONAL EXPERIENCE

TECH LEAD - PCI Energy Solutions, Norman, OK Dec 2019 – Present

Lead design and development of **advanced analytics platform** serving electricity providers across all US markets, **processing millions of daily queries and petabyte-scale grid data.**

- Architected and developed scalable backend systems using Java Spring Boot, PostgreSQL, and optimized data access patterns (JPA, EBean, jOOQ) supporting **millions of daily utility operator queries.**
- Integrated Apache Spark, Trino, and iceberg to process **petabyte-scale analytical workloads**, enabling real-time grid analytics critical to grid operations.
- Mentored junior developers, interviewed candidates for team expansion, and led technical design reviews ensuring architectural alignment and code quality.

SOFTWARE ENGINEER - Cognizant Technologies, Oklahoma, OK Jun 2018 – Dec 2019

Developed critical components of **HIPAA-compliant insurance claims clearing house platform**, processing healthcare claims between providers and payers on RHEL and Azure.

- Implemented secure solutions for claims data processing, ensuring strict HIPAA compliance and healthcare industry standards.
- Enhanced system resiliency with automated remediation, maintaining **99.9%+ uptime** for thousands of providers and payers; **reduced operational overhead by 40%** through automation.

SOFTWARE DEVELOPER INTERN - Eaton's Crouse-Hinds, Syracuse, NY Dec 2017 – May 2018

Tested, debugged, and optimized embedded firmware and dashboard software for hazardous location lighting systems; **reduced testing time 400%** through automated test suite.

- Resolved critical firmware and dashboard issues, enabling reliable remote commissioning under extreme environmental conditions.

SOFTWARE DEVELOPER INTERN - AptaMatrix, Inc., Syracuse, NY Dec 2016 – Feb 2017

Processed proprietary binary data from Illumina HiSeq 2500 sequencers using Perl and C, enabling DNA-protein interaction analysis from FastQ and cluster intensity files.

PROJECT ENGINEER - Wipro Technologies, Chennai & Pune, India Nov 2013 – Jun 2016

Developed and maintained dashboard applications for Nestlé using Perl CGI and Shell scripting; streamlined data extraction and reporting processes.

- Interviewed, trained, and **mentored new Perl developers**, coordinating weekly progress meetings with clients.
- Supported Avaya customer onboarding and incident management, automating service request workflows with BMC Remedy and HP NNMi; **reduced task execution times by 90%**, earning 'Category Creator – Automation' award.

EDUCATION

MS in Computer Engineering, GPA 3.60/4.0 | Syracuse University, May 2018
B. Tech in Information Technology, GPA 7.65/10 | Anna University, May 2013
