# Syed Yaser Ahmed

## Senior Software Developer

Richardson, TX 75080 | yaser1091@gmail.com | (315) 480-9522

**LinkedIn**: www.linkedin.com/in/yasersyed | **GitHub**: www.github.com/yasersyed

Backend-focused Senior Software Developer with 8+ years of experience building secure, scalable microservices in Java Spring Boot. Skilled in AWS, Kubernetes, Docker, and CI/CD, with a proven ability to optimize backend performance, automate operations, and implement robust authentication and security in cloud-native environments.

### Core Competencies

**Software Engineering Practices**: TDD, Clean Code, Agile Methodologies (Scrum, Kanban), CI/CD (GitLab CI), Design Patterns

**Cloud & Microservices**: AWS (EC2, S3, Lambda), Kubernetes, Docker, Spring Boot, Microservices Architecture

**Data & Big Data Technologies**: PostgreSQL, Apache Spark, Trino, JPA, MongoDB

### Technical Skills

**Languages:** Java (17+), SQL, Python, Bash, JavaScript/TypeScript (Node.js, React), C/C++, C#, PHP, Perl

**Tools & Frameworks:** Git, SVN, Spring Boot, Docker, Kubernetes, Kafka, RabbitMQ, Express, Gitlab CI/CD, Apache Spark, Trino, JPA

### Professional Experience

**SENIOR SOFTWARE DEVELOPER | Power Costs, Inc., Norman, OK** **Dec 2019 – Present**

Lead the design and development of web services for advanced analytics software in the electrical industry domain.

- Built scalable backend systems using Java 17, Spring Boot, and PostgreSQL with efficient data access layers with JPA, EBean and jOOQ.
- Integrate big data technologies (Apache Iceberg, Spark, Trino) to manage large-scale analytical workloads and enable complex queries.
- Designed and delivered **secure, high-performance microservices in Java 21/Spring Boot** on AWS, implementing **RabbitMQ-based messaging** and **SQL data layers** to ensure operational stability for mission-critical analytics platforms.
- Mentored junior developers and led sprint planning and technical reviews to ensure high-quality delivery.
- Follow best practices in software engineering, including clean code principles, test-driven development (TDD), and agile methodologies to ensure high-quality deliverables.
- Optimize system performance, focusing on distributed data processing and query efficiency in cloud environments.
- Led technical design reviews and vendor evaluations to ensure architectural alignment, scalability, and security in software solutions.

**SOFTWARE ENGINEER | Cognizant Technologies, Oklahoma, OK** **Jun 2018 – Dec 2019**

Developed and maintained critical components of a real-time clearing house platform on RHEL and Azure, using Shell scripting, Tclsh, and PHP to automate workflows and support internal/external web applications.

- Enhanced system resiliency and automated remediation of recurring issues in a high availability clearing house platform, aligning with **financial services operational stability best practices**.
- Contributed to performance tuning and automation initiatives, reducing manual operational overhead and ensuring compliance with service-level agreements (SLAs) for real-time processing.

**SOFTWARE DEVELOPER INTERN | Eaton's Crouse-Hinds, Syracuse, NY** **Dec 2017 – May 2018**

Tested, debugged, and optimized embedded firmware and dashboard software for hazardous location lighting systems, enabling reliable remote control and commissioning in extreme conditions. Used Wireless HART protocol for reliable communication between controllers and gateways.

- Resolved critical issues in both firmware and dashboard software of hazardous location lighting controls, enabling reliable remote commissioning and control of fixtures designed to operate under extreme environmental conditions.
- Collaborated with offsite development teams to enhance firmware efficiency and contributed to process improvements during agile sprints. Reduced testing time ~400% by designing and implementing an automated firmware test suite.

**SOFTWARE DEVELOPER INTERN | AptaMatrix, Inc., Syracuse, NY** **Dec 2016 – Feb 2017**

- Processed proprietary binary data from Illumina HiSeq 2500 sequencers using Perl and C, enabling analysis of DNA-protein interactions from FastQ and cluster intensity files.

**PROJECT ENGINEER | Wipro Technologies – Chennai & Pune, India | Nov 2013 – Jun 2016**

- Developed and maintained dashboard applications for Nestlé using Perl CGI and Shell scripting; streamlined data extraction and reporting processes.
- Interviewed, trained, and mentored new Perl developers, coordinating weekly progress meetings with clients.
- Supported customer onboarding and incident management for Avaya, automating service request workflows with BMC Remedy and HP NNMi. Reduced task execution times by 90% through automation initiatives, recognized with the "Category Creator – Automation" award.

### Education

**MS in Computer Engineering, GPA: 3.60/4.0** | Syracuse University, Syracuse, May 2018

**B. Tech in Information Technology, GPA: 7.65/10** | Anna University, Chennai, May 2013
